abstract: The iterator concept checking classes provide a mechanism for a template to report better error messages when a user instantiates the template with a type that does not meet the requirements of the template.

For an introduction to using concept checking classes, see the documentation for the boost::concept_check library.

Reference

Iterator Access Concepts

- Readable Iterator
- Writable Iterator
- Swappable Iterator
- Lvalue Iterator

Iterator Traversal Concepts

- Incrementable Iterator
- Single Pass Iterator
- Forward Traversal
- Bidirectional Traversal
- Random Access Traversal

```
{\tt iterator\_concepts.hpp~Synopsis}
```

```
namespace boost_concepts {
    // Iterator Access Concepts
    template <typename Iterator>
```

```
class ReadableIteratorConcept;
template <
    typename Iterator
  , typename ValueType = std::iterator_traits<Iterator>::value_type
class WritableIteratorConcept;
template <typename Iterator>
class SwappableIteratorConcept;
template <typename Iterator>
class LvalueIteratorConcept;
// Iterator Traversal Concepts
template <typename Iterator>
class IncrementableIteratorConcept;
template <typename Iterator>
class SinglePassIteratorConcept;
template <typename Iterator>
class ForwardTraversalConcept;
template <typename Iterator>
class BidirectionalTraversalConcept;
template <typename Iterator>
class RandomAccessTraversalConcept;
// Interoperability
template <typename Iterator, typename ConstIterator>
class InteroperableIteratorConcept;
```

}
